

XPM: cascade $\times(1+R)$ over native; XPM $\times 2$ over SPM -- $\Omega = 0.5\gamma_2$, $\tilde{\alpha}_3 = +0.04$, $\Delta\omega = -2\gamma_2$ (constructive; $R \simeq 12$)

(a) XPM phase shift: cascade exceeds native by $\sim(1+R)$

(b) $(1+R)$ cascade/native and factor-2 XPM/SPM
